Hon. William K. Reilly
Administrator
Environmental Protection Agency
401 M Street, S.W.
Washington, D.C. 20460

Dear Mr. Reilly:

Air pollution is a continuing problem in our area and throughout the country. It is important that every effort be made to explore ways to improve air quality. It has been brought to my attention that a gasoline performance additive called HiTEC 3000 could play a role in reducing automotive emissions.

This additive seems to significantly reduce smog-producing nitrogen oxide, as well as overall tailpipe emissions. I understand that the additive is readily available and compatible with the reformulated fuels being considered for widespread use in this country and has been used for some time in Canada.

It is of the utmost importance that we find ways to reduce air pollution, and this additive may be part of the answer. I hope that the Environmental Protection Agency gives HiTEC 3000 prompt consideration for use in this country.

Yours very truly,

Joe Clarke
